

Caring for your piano

Enjoy playing your piano

Caring for your piano will save you money as the tuning will be more stable and the piano will be much more enjoyable to play and listen to.

Try to avoid fluctuating heat and humidity as these are often responsible for tuning instability. Excessive heat may cause other serious problems within the piano. A life saver system could be fitted to help counteract this.

Try to position your piano away from a radiator or heat source. If you have underfloor heating, you may need a piano carpet or thermal barrier underneath the piano to help protect it.

Your piano is an important part of your home and will be rewarding to play if well looked after.

We can supply Piano Life Saver Systems, Piano Carpets and Thermal Barriers to pianos in your home.

Piano Life Saver Systems

Provide automatic humidity control for your piano

Benefits of consistent humidity:

Your piano is made primarily of wood, felt and metal.

Fluctuations in humidity can impact all of these components in the same way that a door sticks on a humid day, or wood joints can loosen if the atmosphere is too dry.

If the humidity and temperature fluctuate it can result in an unstable piano that struggles to remain in tune.

The Piano Life Saver system levels out humidity fluctuations, alleviating many negative side effects and ultimately can prolong the life of your piano.

We are authorised Damp-Chaser stockists with fully trained technicians to fit them

As endorsed by many major piano manufacturers including:

Upright piano

02-2022

Thermal Barriers

An alternative to a piano carpet, would be a Thermal Barrier. This is a special reflective foil material that can be fitted to the underside of your upright piano to provide protection from underfloor heating.

The thermal barrier is discreetly fitted to the underside of your piano so that it is virtually invisible.

Cost from - £65
